

Protocol by Jan Ritt

First steps with **Node.js** and **npm**

1.) Tools (*Versions:*)

```

PROBLEMS    OUTPUT    DEBUG CONSOLE    TERMINAL    PORTS    SQL HISTORY

PS C:\Users\janri\[my] desktop\WMC\HelloWorld> code --version
1.94.0
d78a74bcdfad14d5d3b1b782f87255d802b57511
x64
PS C:\Users\janri\[my] desktop\WMC\HelloWorld> git --version
git version 2.45.2.windows.1
PS C:\Users\janri\[my] desktop\WMC\HelloWorld> node --version
v20.17.0
PS C:\Users\janri\[my] desktop\WMC\HelloWorld> █

```

2.) CowSay:

```

PS C:\Users\janri\[my] desktop\WMC\HelloNode\start> node app.js
Hello Enki

```

```

-----
< Oi oi oi >
-----
      ^ ^
      (oo)\_____
      (__) \       )\/\
           ||----w |
           ||     ||

-----
( Hello Enki )
-----
      o ^ ^
      o (oo)\_____
      (__) \       )\/\
           ||----w |
           ||     ||

```

- I followed the steps in the given README.md.

- I don't know what to protocol - after all I just did the same things in multiple different ways..
- I used git via git-commands - which is pretty inconvenient if one knows that all this could be done by a single button-press in Visual Studio, it feels a bit backward to do it in the VSC terminal, with hundreds of commands and without tab-completion or any such "modern" feature.
- Even on Linux i would run zsh, zsh-completion, zsh autosuggestion & tab completion, and would have a much nicer experience.
- I think it is not up to date to look in the help-file or even start up google each time, if it could be done in another way (like one, single button in VS)
